**FLOW SENSOR INTEGRATED WITH LEAK DETECTION**  
**FOR PURGE VALVE DIAGNOSTIC**

**RESTRICTION**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, drawn to a method of fuel vapor management, classified in class 73, subclass 49.7.
- II. Claims 15-36, drawn to a fuel vapor management apparatus, classified in class 73, subclass 118.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as detecting a pressure and a temperature without requiring both an engine running state and an engine-off state. See MPEP § 806.05(d).

Art Unit: 2855

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and thus the search required for one invention is not required for the other invention, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
